

# Percent Ash (by FIA Plot) in Michigan

## Key

### FIA Plot Percent Ash

- 0 - 10
- ▲ 10 - 24
- 24 - 42
- 42 - 69
- 69 - 100

Michigan Counties

"Percent ash" was calculated by determining the basal area of ash trees for each FIA plot and comparing this to the total basal area of the plot.

Sampling in northern portions of the state is at a higher intensity, which may give a false impression that more ash trees are found in the north. Refer to the map of all FIA plots at <http://www.michiganash.org/maps.html> for a reference.

FIA plot locations as shown should be accurate to within 100 seconds of their true location (100 seconds = ~ 1.2 miles)
